

I just want to let you know how much satellite radio has benefited me. I'm on the road all the time. Satellite radio has provided me more choices in music and a valuable tool of information of Traffic and weather where ever I'm at. This kind of service is not available on air radio. Satellite radio is a paid for service buy the listener. It is not up to the NAB to say what we can or can not hear. Just because they can't handle or want to compete with this great new competition. I think the petition 04-160 should be rejected. The satellite listeners pay for and want this service.
